Skills

Experienced Unity Developer
with extensive shader experience

Custom Lighting Models
stylised lighting models optimised for lower end devices

Pipeline Tools
close collaboration with artists & designers to develop tools for their workcases

Cross-Disciplinary Communication
fluent in both programming and design

3D Animator
from character animation to VFX and post-production

Languages

C#	8 years
HLSL	3 years
JavaScript	3 years
TypeScript	3 years

Profile

A person with a large interest in programming, shaders, and 3D animation. I like custom lighting models, DCC tools, and animated cutscenes, and actively seek to improve my skills. I've worked a lot in teams, strengthening my cross disciplinary communication. I try to let everyone use their strengths, as well as actively seek and give feedback.

Education

Medialogy (MS) - Aalborg University, Sydhavn

2025 - Present

Specialising in programming and technical art. Developed a novel Dynamic Difficulty Adjustment system and editing tools for it actively used by designers, multiple graphical Unity shaders, and in-engine DCC tools actively used by artists across multiple groups projects.

Medialogy (BSc) - Aalborg University, Sydhavn

2022 - 2025

Studied user-centric iterative design processes with a focus on accessibility. Worked on multiple games in small teams, serving as everything from programmer, teach artist, 3D animator, all the way to UX specialist.

Work

Teaching Assistant - Aalborg University, Sydhavn

2024 - Present

Created a video series to help apply the elements from the Mathematics for Multimedia Experiences course in programming and tech art contexts, and helped explain concepts in the UX: Quantitative User-Evaluations courses, as well as held solo lectures to assist the students.

Game Art Teacher & Project Coordinator - UNF GDC, volunteer

2022 - Present

Mentoring young, aspiring game developers in the process of learning how to create games, shaders, and game graphics, at the UNF Game Development Camp. Currently the main coordinator of the academic contents of the camp.

Projects

VR Novel Interaction Technique - University Group

February 2026 - Present

Developing a new VR interaction method for manipulating distant objects along with a puzzle game to test the fidelity and user experience of the method; Out of Reach. I made a cel shaded lighting system that runs on builds for the Meta Quest 2, along with a highly stylized cutscene where I coordinated collaboration with outside sources.

Difficulty Oriented Action Planning - University Group

September 2025 - November 2025

Masterpieces; A stealth game where NPC guards are controlled by a Goal Oriented Action Planning (GOAP) system with embedded Dynamic Difficulty Adjustment (DDA). I developed the DDA implementation along with tools that allowed designers to easily alter and test different difficulty levels, as well as developed multiple shaders and animated cutscenes

Cartoony Murder Mystery Game - University Group

February 2025 - May 2025

Killer on Board; A halftone shaded comical murder mystery, with its associated research project published in the journal Interactive Storytelling. I made lighting and VFX shaders, dynamically animated cutscenes, tools used by other artists, UI systems, and programmed multiple mechanics.
